ONE BY ONE

How it works?

Thanks to the location of the openings for removing gloves at the bottom of the package, the gloves are protected against contaminants falling by gravity (for example: dust, paint chips, metal filings).

ONE BY ONE

How it works?

The gloves are arranged in a v-folded system – fingers pull the cuffs down. With one pull, only one glove comes out of the package.

MERCATOR

gogrip

ONE BY ONE

Why it's important?

The "one by one" system allows you to remove only one glove and helps avoid the situation that happens when you take gloves from a standard box - instead of one, you wash several pieces.

EASY TO TAKE
